

Jupyter Notebook Installation Guide:

This is recommended to use “Anaconda” for accessing Jupiter notebook:

1. Please download Anaconda from: <https://www.anaconda.com>
2. Go to <https://github.com/mona2442/Data-science-workshop--polymer-solubility-ML-model>

3. Under the code section, download the zip folder and extract the folder.

4. In Anaconda, open the Jupiter notebook!

5. Open the [Plotting folder](#)

6. Open the plotting folder/ First note! This is the guide to how to do basic plotting using the Python!

7. Here are a few tips for using the Jupiter notebook:

- For new notebook: Go to File/New Notebook/Python 3.
- You can set up the block format by selecting from the drop-down menu, markdown (when you are typing only words), or code (for code parts).

- It's as simple as adding a new block using the + symbol.
- All the blocks work in sequence, so when you are importing a package on top of your file or defining a dataset, you need to save the block and run that block and all the future ones.
- You can find more details in: [Jupyter Notebook Tutorial pdf](#)
